# Take Command + Control of Communications and Presentation

Crestron delivers complete control solutions that streamline and simplify technology, providing reliable and seamless presentations in any facility.

Crestron is the global leader of advanced control solutions, taking command of communication technology in training rooms, briefing rooms, CCCs, NOCs, and EOCs. Today, government and military officials understand the benefits of deploying streamlined, integrated strategies in the field. At Crestron, we take that same approach in every facility and each room. With a simple touch of the screen, officials may select, size, view and even draw over multiple sources including live video, radar, high-resolution maps and HDTV on displays and MIL-STD-1472 screens throughout the building and around the world. A customized, user-friendly interface provides intuitive operation so officials can focus on the mission not on the equipment.

Disseminate information and transfer knowledge quickly and easily in training and briefing rooms. Take control of courtrooms and conference rooms. **Streamline operations, integrate disparate systems and simplify technology with Crestron.**

### **MPS-250** Multimedia Presentation System

This all-in-one solution combines a 2-Series control system, multimedia matrix switcher, amplifier, mic mixer, audio processor, and QuickMedia® transport technology in a single rack mount package. Bring complete presentation control and signal routing to training and briefing rooms, courtrooms and conference rooms. MPS works right out of the box; and does not require a separate control system or programming.

### **TPS-17** Isys™ Widescreen Tilt Touchpanel

The TPS-17 features a 17" WXGA widescreen display offering an extra wide viewing angle with exceptional brightness and contrast for brilliant control graphics, high-resolution images, and full-motion video. Intuitive graphical interfaces are customized to streamline and simplify technology; control audio, video, lights, cameras, shades and thermostats – all from the Crestron touchpanel.

### **TPS-6X** Isys™ Wireless Touchpanel

A compact RF or IR wireless touchpanel, the TPS-6X does away with piles of remotes and cryptic control panels, affording true "one-touch" control over a broad range of complex devices and systems. Featuring a bright, high-contrast color touchscreen, the TPS-6X offers an ideal user-interface for controlling multimedia presentations as well as a host of other uses.

### **TPMS-8L** Isys i/O® Touchpanel

The TPMS-8L is a wall mount, touchpanel media center. Embedded PC applications that allow you to access the Internet, view streaming media and open MS Word®, PowerPoint®, Excel® and Adobe® Acrobat files directly from the touchscreen.

### **DVPHD** High-Definition Digital Video Processor

This high-definition digital video processor accepts up to eight sources and displays them simultaneously in up to eight scalable windows on a single display. DVPHD automatically processes input/output resolutions up to 1920x1200 for RGB and DVI, supports 1080p/60 HDTV, and manages HDMI/HDCP. The on-board graphics generator displays maps, icons and dynamic text.

### **CLS-C6** iLux® Integrated Lighting Control System

Control six lighting zones and six shade groups directly from the front panel of the CLS-C6. Up to 16 Crestron keypads and shade controllers may also be connected to a single unit, and up to nine iLux devices may be cascaded to achieve 54 distinct lighting zones. The iLux supports 16 preset scenes, and built-in motion detectors are available. Ethernet connectivity enables Crestron RoomView® remote management and integration with a full Crestron automation solution.

Recognizing the unique needs of government agencies, Crestron established the Government Support Services Program (GSS). Designed to operate within the framework of our established dealer network, the GSS Program grants direct access to Crestron's award-winning True Blue Support team for optimum collaboration.
